Higher

Finalised Marking Instructions

© Scottish Qualifications Authority 2019

These marking instructions have been prepared by examination teams for use by SQA appointed markers when marking external course assessments.

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.

General marking principles for Higher Accounting

Always apply these general principles. Use them in conjunction with the specific marking instructions, which identify the key features required in candidates' responses.

- (a) Always use positive marking. This means candidates accumulate marks for the demonstration of relevant skills, knowledge and understanding; marks are not deducted for errors or omissions.
- (b) If a candidate response does not seem to be covered by either the principles or specific marking instructions, and you are uncertain how to assess it, you must seek guidance from your team leader.
- (c) Always follow through consequentiality subsequent to a calculative error and give credit for any errors in subsequent calculations or working.
- (d) Mark scored out or erased working which has not been replaced, where still legible. However, if the scored out or erased working has been replaced, mark only the work which has not been scored out.
- (e) For **state** questions, candidates must list a number of relevant items or facts. These must relate to the context of the question and do not need to be in any particular order.

Up to the total mark allocation for this question

- award **1 mark** for each relevant item or fact.

- (f) For **describe** questions, candidates must make a number of relevant factual points, which may be characteristics and/or features, as appropriate to the question asked. These points may relate to a concept, process or situation. Candidates may provide a number of straightforward points or a smaller number of developed points, or a combination of these.

Up to the total mark allocation for this question

- award **1 mark** for each relevant factual point
- award **1 mark** for any further development of a relevant point, including exemplification when appropriate.

- (g) For **analyse** questions, candidates must demonstrate their ability to identify, describe and explain relevant parts and the relationships between the parts and/or the whole. Candidates must be able to draw out and relate any implications.

Up to the total mark allocation for this question

- award **1 mark** for each relevant point of analysis
- award **1 mark** for any further development of a relevant point, including exemplification when appropriate.

Marking instructions for each question

Section 1

			Income Statement						£2,200		0			0
			Account names, running balance and no arithmetical errors in balance column. (1)											
	(b)	(i)	Process Costing consists of a succession of continuous operations or processes. (1) Each process represents a different stage of manufacture. (1) The output of one process becomes the input of another. (1) This continues until the units are complete and are transferred to a Finished Goods account. (1)									1		
		(ii)	Normal loss is anticipated whereas Abnormal loss is unexpected. (1) Normal loss is valued at 0 or scrap value whereas Abnormal loss is valued at the good output value. (1) Normal loss cannot be avoided whereas Abnormal loss is a loss which is over and above the normal loss. (1)									2
