

INTERNET RESEARCH

I found anthropometric sizes for up to age 2.
The key sizes here are the length and breadth of the biggest child. This is the 2-year-old. The maximum height is 33" = 338 mm.
The maximum width is across hips and is 6.8" = 172 mm.
Note that these sizes do not include clothing.

Wheelchair turning circle — 1500 mm, height of worktop — min 760 mm, clearance height for knees — min 700 mm.

I took a picture of the inside of the centre when I was interviewing the manager of my local store so that I would remember what the aesthetics were like.

It should clarify aspects such as aesthetics, function, ergonomics, performance, and cost.
