Question		Generic Scheme	Illustrative Scheme	Max Mark
9	a			
• ¹	ss	know to differentiate	• ¹ $a = v'(t)$	3
• ²	pd	differentiates trig. function	• ² $-8\sin\left(2t - \frac{\pi}{2}\right) \dots\dots$	
• ³	pd	applies chain rule	• ³ $\dots\dots \times 2$ and complete $a(t) = -16\sin\left(2t - \frac{\pi}{2}\right)$	

Commonly Observed Responses:

Candidate A: Alternative Method

Part (a)

$$v(t) = 8\cos\left(2t - \frac{\pi}{2}\right) = 8\sin 2t$$

$$v'(t) = \dots \quad \bullet^1 \checkmark$$

$$= 8\cos 2t \dots$$

$$\bullet^2 \checkmark$$

$$= \dots\dots \times 2 \quad \bullet^3 \checkmark$$

Part (b)

$$v'(10) = 16\cos 20 = 6.53$$

$$\bullet^4 \checkmark$$

$> 0, \Rightarrow$ velocity is increasing $\bullet^5 \checkmark$

Part (c)

$$s(t) = \int v(t) dt \quad \bullet^6 \checkmark$$

$$s(t) = -4\cos 2t + c \quad \bullet^7 \checkmark$$

$$4 = -4 + c \Rightarrow c = 8$$

$$\Rightarrow s(t) = -4\cos 2t + 8 \quad \bullet^8 \checkmark$$

$$\text{or } \Rightarrow s(t) = 8 - 4\cos 2t$$

Candidate B: Candidates who misinterpret the process for rate of change.

Part (a)

$$a(t) = \int 8\cos\left(2t - \frac{\pi}{2}\right) dt$$

$$= 4\sin\left(2t - \frac{\pi}{2}\right) + c$$

Wrong process award $\frac{0}{3}$

Part (b)

$$\text{If } t = 10, a = 4\sin\left(20 - \frac{\pi}{2}\right) + c$$

$$= -1.63 + c$$

Cannot evaluate award $\frac{0}{2}$

Part (c)

$$s = v'(t)$$

$$s(t) = -16\sin\left(2t - \frac{\pi}{2}\right)$$

Award $\frac{2}{3}$

Candidate C

Part (a)

$$a = v'(t) \text{ or equivalent} \quad \bullet^1$$

$$a = 4\sin\left(2t - \frac{\pi}{2}\right) \quad \bullet^2 \times \quad \bullet^3 \times$$

Part (b)

$$a(10) = 4\sin\left(20 - \frac{\pi}{2}\right) = -1.63 \quad \bullet^4$$

< 0 , So decreasing $\bullet^5 \checkmark$

Only as a consequence of $\bullet^1$ in part (a)

Question		Generic Scheme		Illustrative Scheme		Max Mark
9	b					2
• ⁴	ss	know to and evaluate $a(10)$		• ⁴	$a(10) = 6.53$	
• ⁵	ic	interpret result		• ⁵	$a(10) > 0$ therefore increasing	
Notes:						
1. • ⁵ is available only as a consequence of substituting into a derivative.						
2. • ⁴ and • ⁵ are not available to candidates who work in degrees.						
3. • ² and • ³ may be awarded if they appear in the working for 9(b). However, • ¹ requires a clear link between acceleration and $v'(t)$.						
9	c					3
• ⁶	ic	know to integrate		• ⁶	$s(t) = \int v(t) dt$	
• ⁷	pd	integrate correctly		• ⁷	$s(t) = 4 \sin \left(2t - \frac{\pi}{2} \right) + c$	
• ⁸	ic	determine constant and complete		• ⁸	$c = 8$ so $s(t) = 4 \sin \left(2t - \frac{\pi}{2} \right) + 8$	
Notes:						
4. • ⁷ and • ⁸ are not available to candidates who work in degrees. However, accept $\int 8 \cos (2t - 90) dt$ for • ⁶ .
